

ALUMINUM WELDING: EXPANDED EXPERTISE

ALUMINUM WELDING AT THIES: EXPANDING OUR EXPERTISE

For decades, Thies has been synonymous with high-quality stainless steel welded structures. With the successful certification of our welding processes for **aluminum**, we are now expanding our manufacturing capabilities to include another challenging material.

Aluminum offers numerous advantages, such as low weight, high corrosion resistance, and good thermal conductivity—but it also places high demands on welding processes. Thanks to our expanded manufacturing expertise, we will now be able to produce **aluminum containers, components, and custom designs** in Thies's proven quality.

Are you planning a project involving aluminum? Contact us—we'll support you from the initial idea to the finished component.
